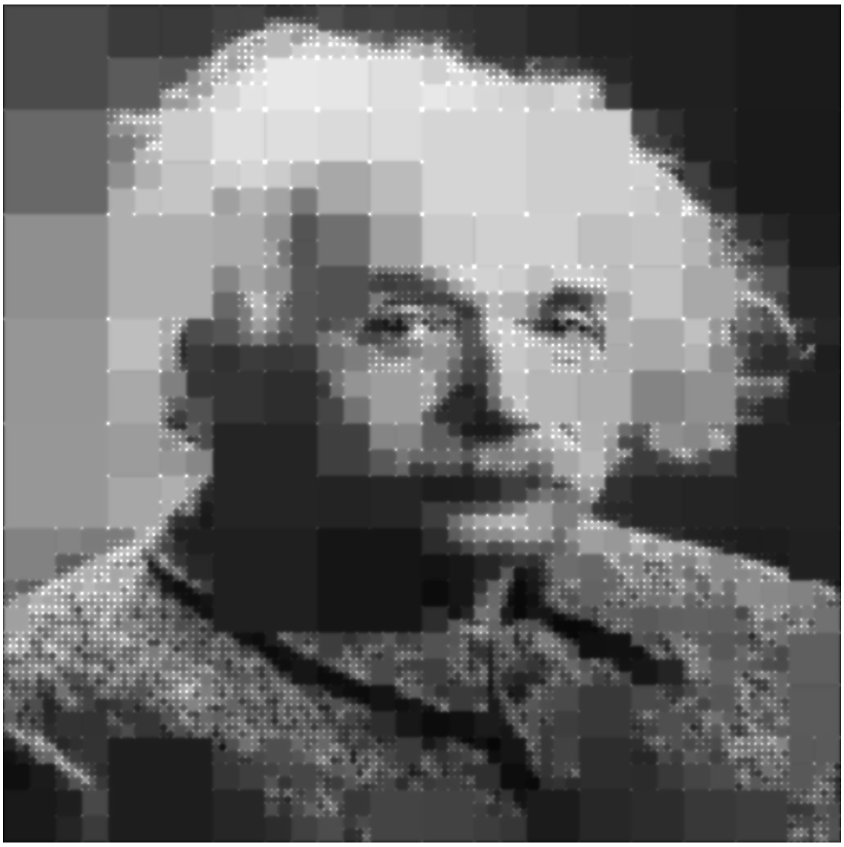
The QuadTree Mosaic: Formal Mathematical Representation



Mathematical Formulation (Procedural Spatial Partitioning)

The image above is generated entirely by the following procedural function, consisting of 3,460 geometric constraints (boxes):

$$F(x, y) = \sum_{k=1}^{3460} C_k \cdot \text{sdfmask}\left(\text{box}\left(x, y, cx_k, cy_k, w_k, h_k\right), 0.001\right)$$

Where:

- C_k is the localized brightness scalar of the k-th quadtree cell.
- cx_k, cy_k are the precise spatial coordinates of the center of the cell.
- w_k, h_k define the scale/depth of the cell in the QuadTree hierarchy.
- sdfmask$(\ldots, 0.001)$ serves as a mathematically continuous boolean intersection, returning 1 inside the cell and 0 outside.

Complete QuadTree AST Source Code (All 200,748 characters):
