

The Yeganeh Einstein: A Mathematical Portrait

Mathematical Representation (Degree 25 Polynomial Fingerprint)

The image above is generated entirely by the following procedural function:

$$F(x, y) = \text{sdfmask} \left(\cos \left(200 \sqrt{x^2 + y^2} \right) - (P_{25}(x, y) \times 2 - 1), 0.1 \right)$$

Where $P_{25}(x, y)$ is the exact 2D algebraic polynomial of degree 25 derived via Least Squares Projection, containing 351 terms:

$$P_{25}(x, y) = \sum_{i=0}^{25} \sum_{j=0}^{25-i} C_{i,j} \cdot x^i \cdot y^j$$

Raw Yeganeh AST Source Code (Truncated excerpt of the 8,635 character string):

```
let(x, x*2-1, let(y, y*2-1, let(brightness, clamp(0.12456 + 0.34211*x + 0.05122*y +  
  ↪ (-0.93210)*(x^2) + 0.11432*x*y + ... + (-0.00012)*(x^25) + 0.00004*(x^24)*y, 0.0,  
  ↪ 1.0), let(pattern, cos(200 * sqrt(x^2 + y^2)), sdfmask(pattern - (brightness*2-1),  
  ↪ 0.1))))))
```
